

Match & Match

PROJECT: #230209

WORKSHOP: SOFTWARE ENTREPRENEURSHIP WORKSHOP

MEMBERS: ERAN YOSEFIA, OHAD SEGAL, IDAN COHEN

MENTOR: DROR MARGALIT

Problem

01

Matching algorithms

Unlocking the Science of Connection: The effectiveness of dating site algorithms in generating precise and satisfying matches is a subject of ongoing discussion. We focus on the art of creating meaningful connections that go beyond algorithmic compatibility.

02

Overwhelming choices

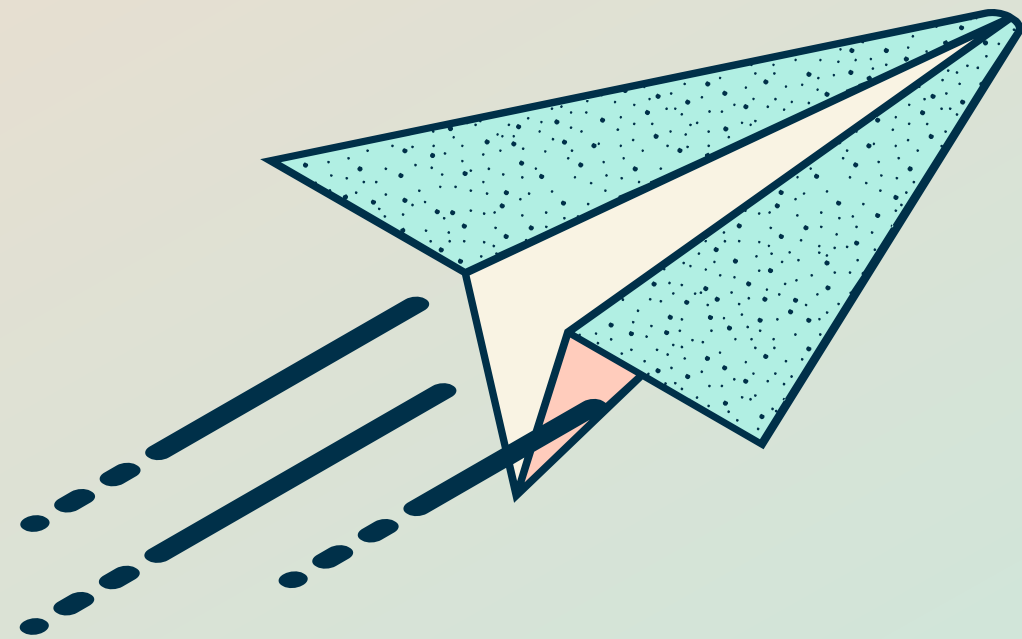

Navigating the Sea of Options: The wealth of potential matches can sometimes lead to a state of decision fatigue or a perpetual search for an elusive "perfect" match. Our approach is about simplifying this journey, helping individuals find connections that resonate on a deeper level.

03

Communication challenges

Building Bridges in Online Interactions: Online interactions often lack the richness of non-verbal cues and contextual depth, making it challenging to gauge chemistry and establish authentic connections. We're dedicated to bridging this gap, facilitating genuine conversations that foster meaningful bonds.

match&match mission

01

Mastering Online Dating

Maximizing The Chances of Finding Love

02

Optimizing Dating

Choosing Suitable Partners and Excelling on First Dates

03

Effortless Dating

Making it Fun and Easy

Solution

01

Match & Match

Dating site for finding love based on artificial intelligence

02

Games And Attractions

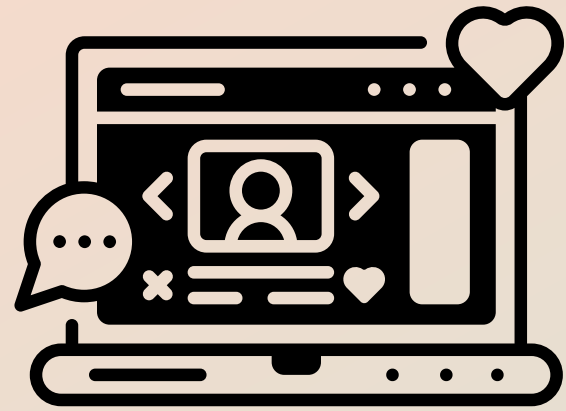

Couples can play shared games, uniquely selected based upon personal preference and interests to foster chemistry and connection prior to their first date.

03

Personal Assistant

An AI personal assistant Which can facilitate both parties with creative ideas to nurture the relationship, encompassing joint activities and engaging conversation topics.

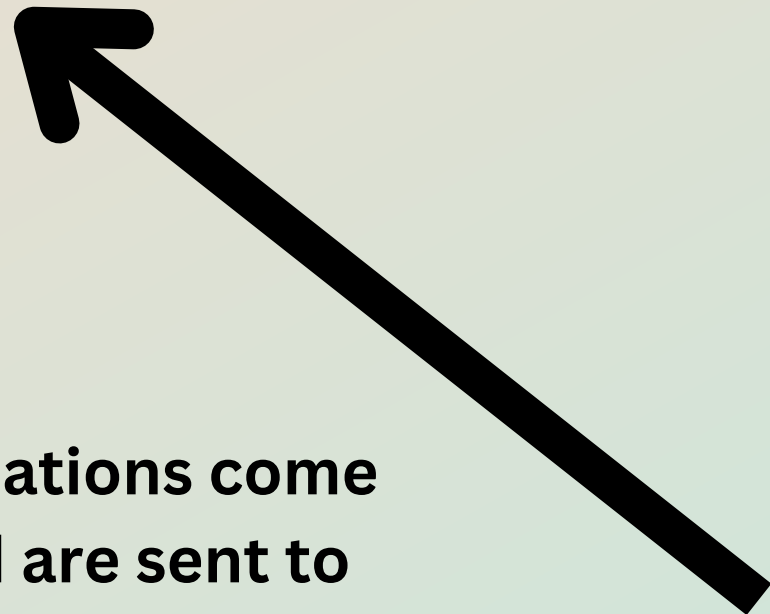

AI Architecture - Workflow

During the registration process, the user provides information such as hobbies, favorite food, place of residence, and more.

The recommendations come from the AI and are sent to the user

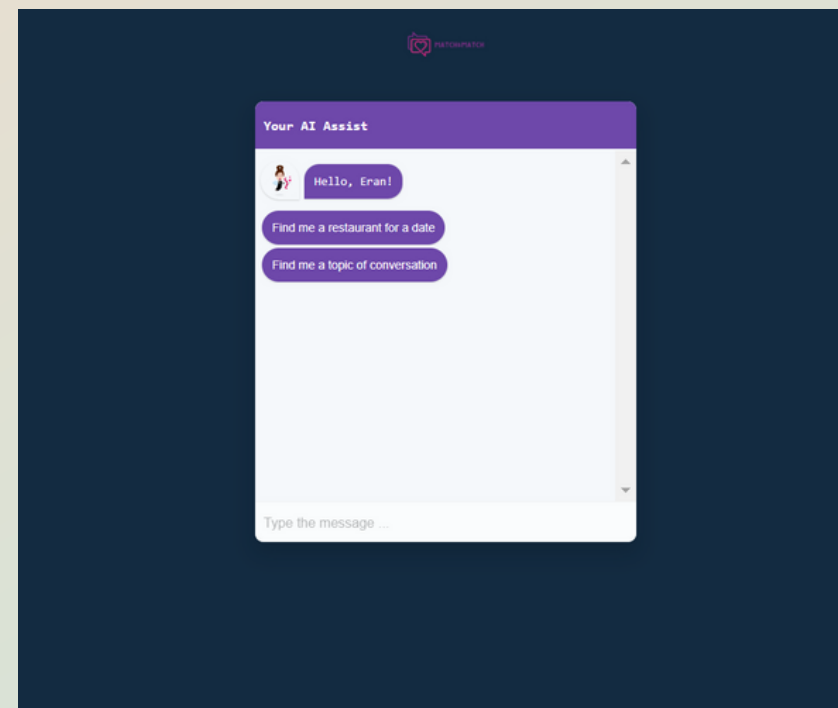

The database information will be used by AI to create Recommendations for shared activities and conversation topics
